## PROFESSIONAL PROFILE

Results-driven Software Developer with extensive experience at Deloitte delivering high-performance enterprise applications. Expert in architecting robust full-stack solutions using C#, .NET Web API controllers, and Angular TypeScript, with specialized proficiency in Abby Flexilayout, Abby Flexicapture, and complex OCR automations. Proven track record of optimizing database procedures in SQL Server SSMS and implementing comprehensive telemetry via Azure Monitoring and KQL Query logs. Skilled in resolving production bottlenecks and translating complex business requirements into scalable, reliable software.

## TECHNICAL SKILLS

Python • GenAI • LLM (OpenAI, Gemini) • OCR API • Abby Flexicapture • Flask • MongoDB • SQL • MySQL • .NET • C# • Angular • Java • Data Structures • Web Development • PHP • AIML • DBMS • HTML • CSS • C++ • Javascript • Deep Learning • NLP • PyTorch • Keras • LangChain • Streamlit

## WORK EXPERIENCE

### Software Developer II | *Deloitte*

June 2026 - Present

- Elevated to Software Developer II following a track record of high-impact delivery, responsible for developing and maintaining robust web applications within the tax and legal workflows.
- Engineered and optimized high-performance backend modules using .NET Web API controllers, improving API response times and ensuring reliable data exchange.
- Created custom telemetry and dashboard integrations using Angular TypeScript for frontend, allowing tax professionals to monitor pipeline statuses in real-time.
- Integrated Azure Monitoring and KQL Query logs for Azure to proactively identify system errors, reduce application downtime, and streamline debugging across environments.
- Optimized SQL Server SSMS database procedures and indexing strategies, leading to a 35% reduction in query latency for high-traffic financial systems.

### Software Developer I (Xtract-K1 Project) | *Deloitte*

August 2024 - May 2026

- Engineered the 'Xtract-K1' automated processing system, utilizing C# and .NET Core to handle complex tax forms (1065, 1041, 1120s) for high-net-worth entity portfolios.
- Integrated high-fidelity OCR APIs, Abby Flexilayout, and Abby Flexicapture workflows to automate data extraction from unstructured tax documents, achieving a 98.5% accuracy rate and reducing manual data entry by 80%.
- Developed a robust frontend using Angular TypeScript for frontend to review and validate extracted data, featuring real-time validation rules integrated with SQL Server SSMS backends.
- Designed a complex data migration engine that transforms extracted JSON payloads into sophisticated multi-sheet Excel financial templates using OpenXML, streamlining multibillion dollar tax reporting cycles.
- Optimized API performance for OCR processing by implementing asynchronous processing with .NET Web API controllers, allowing the system to handle thousands of documents per hour.
- Collaborated with tax subject matter experts to translate intricate IRS regulations into executable C# validation logic, ensuring 100% compliance with federal reporting standards.
- Leveraged Azure Monitoring and KQL Query logs for Azure to inspect log files, tracking document batch processing and exceptions across production systems.

TECHNICAL PROJECTS (FULLY LIVE & VERIFIABLE)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                        |

ACHIEVEMENTS

- Awarded Applause Award for exceptional performance in Q2 (performance year 2026) at Deloitte.
- Awarded Spot Award for exceptional performance in Q3 (performance year 2026) at Deloitte.
- Winner of Devpost Student Hacks AI Hackathon.
- SIH-2023 Grand Finalist (Smart India Hackathon).
- Awarded 1st prize in Project Expo at Methodist College of Engineering.

CERTIFICATIONS

- Introduction to Machine Learning (NPTEL - Silver Medalist)
- Java Programming (Coding Ninjas)
- Python Data Structures (Coding Ninjas)
- Amazon ML Summer School Program - 2023
